

# A BETTER CLEAN WITH MICROFIBER

## Save Time and Money

Reduce the amount of chemicals, water, & energy need to clean

The Heavy-Duty Microfiber Mop System is designed to fit the operator's needs. Microfibers are specially designed non-abrasive, non-linting fibers, small enough to penetrate into surface pores and remove tiny dust particles. HD Microfiber Mops save time and money by using a smaller amount of chemicals and water to clean than traditional mops. To use HD Microfiber Mop Pads, simply apply a clean pad, clean the area, and remove the pad to be laundered. The Velcro backing makes changing mop pads quick and easy, which helps eliminate concerns about cross-contamination from one area to another.

Both wet and dust mop pads have an absorbent core. Wet mop pads are available in four colors for color-coding by use or area. Use wet, damp, or dry for a variety of tasks. The lightweight handle and frame reduces the strain of mopping and allows easy maneuvering on flat surfaces: clean walls, ceilings, base boards, and windows with one product. The 360° swivel offers a full range of motion. Its telescoping handle accommodates various tasks and heights. Non-marking end caps protect walls and furniture from scratches.

Resilient HD Microfiber Mop Pads can be laundered numerous times. Do not process microfiber pads with any fabric softeners.

### Features and Benefits

- Saves time and money
- Reduces chemicals, water, and energy to clean
- Eliminates cross-contamination
- Ergonomic design alleviates the strain of mopping
- Lightweight structure provides easy maneuvering
- Velcro backing makes changing mop pads a breeze
- Environmentally friendly: reduces amount of chemicals circulating in the water supply
